

The Contents.

- § 38. *The Nature of the Sun and fixt Stars,* p. 78
§ 39. *That Bodies, and Light, act mutually upon one another,* p. 79
Ibid. *That Light consists of Rays differently refrangible and reflexible,* p. 81
Ibid. *What the Primitive and Original Colours are,* p. 82
Ibid. *What Colours are, in themselves, in the Object, and in our Sensations,* ibid.
Ibid. *What Colours are made by the least refrangible Light, and what by the most,* ibid.
§ 40. *The Cause of the Reflections and Refractions of Light,* p. 84
§ 41. *That all Bodies have their refractive Powers proportional to their Densities,* p. 86
§ 42. *The Cause why Bodies exhibit different Colours,* p. 88
Ibid. *A short Summary, of the Nature and Properties of Light and Colours, as they are set down at full length, in that admirable Treatise of Opticks, by Mr. Newton,* p. 89 & seq.
Ibid. *That the Quantity of Heat and Light, and the Bulk of the Body of the Sun and fixt-Stars, is constantly diminishing,* p. 95
Ibid. *Mr. Bernoulli's Experiment on Barometrical Tubes relating to Light,* p. 96
§ 43. *That in accounting for the Appearances of Nature, from the Principle of Gravitation, we are not confin'd to one single Condition thereof, but must alter these as the Appearances require,* p. 99 & seq.
§ 44. *The Appearances of Cohesion and Solidity,*
